Summit X650 Series

The Summit X650 series switch is a purpose-built top-of-rack switch designed for emerging 10 Gigabit Ethernet-enabled servers deployed in enterprise data centers. Summit X650 helps optimize new server deployments while providing a seamless migration path from existing Gigabit Ethernet-based servers to 10 Gigabit Ethernet-based high-performance servers to start the transition to the new virtualized environment.

Summit X650 provides high density for 10 Gigabit Ethernet in a small 1RU form factor for up to 32 ports in one system and 192 ports in a stacked system. Summit X650 offers two advanced 10 Gigabit Ethernet technologies: 10GBASE-T and SFP+ to accommodate the needs for both copper twisted pair cable and optical fiber-based 10 Gigabit Ethernet.

With its versatile design, Summit X650 provides high density Layer 2/3 switching with low latency cut-through switching and IPv4 and IPv6 unicast and multicast routing to enable enterprise aggregation and core backbone deployment in AC-powered and DC-powered environments.

Summit X650 simplifies network operation with the ExtremeXOS modular OS, used amongst Extreme Networks Ethernet switches. The ExtremeXOS operating system provides high availability and simplicity with one OS everywhere in the network.

Target Applications

- Top-of-rack switch for servers in enterprise data centers
- High-performance 10 GbE core switch for a small network
- High-performance 10 GbE aggregation switch in a traditional three-tiered network
- An ideal choice for 10 GbE Carrier Ethernet access and PON OLT aggregation
- Interconnect switch providing low latency connections for High Performance Cluster Computing (HPCC)

High-Performance Switching and Routing

- 24-port 10 Gigabit Ethernet non-blocking switching in 1 Rack Unit (RU) form factor with standard option to provide 40 Gbps SummitStack™ stacking and 4-port Gigabit SFP ports
- Optional 8-port 10 Gigabit Ethernet module to provide 80 Gbps uplinks and 40 Gbps SummitStack
- Optional 256 Gbps stacking for up to 192 10 Gigabit Ethernet ports in one logically integrated unit, or optional SummitStack-V long-reach stacking via 10 GbE ports
- Optional 512 Gbps stacking for connecting two Summit X650 switches to provide 48 non-blocking 10 Gigabit Ethernet ports

Versatile Architecture

- ExtremeXOS® Operating System—a highly available, secure, open and extensible network foundation
- 10 Gigabit Ethernet over UTP cable and SFP+ for fiber and passive copper direct host attach installation
- Dual Speed support on 10 Gigabit Ethernet and Gigabit Ethernet on 10GBASE-T and SFP+ ports providing smooth migration from Gigabit Ethernet to 10 Gigabit Ethernet

High Availability

- ExtremeXOS modular OS for highly available network operation
- Extends high availability across switches with Multi-Switch Link Aggregation (M-LAG)
- Carrier-grade redundant networking protocol including Ethernet Automatic Protection Switching (EAPS)
- Internal redundant AC/DC power supply and field replaceable fan tray

Comprehensive Security

- Robust MAC and IP security framework
- Threat detection and response with CLEAR-Flow Security Rules Engine
High-Performance Switching and Routing
Summit X650 offers intelligent switching and routing with exceptional high-performance stacking technology for next generation enterprise data centers—as well as dedicated 10 Gigabit Ethernet uplink capabilities powered by the ExtremeXOS modular OS. With its low packet forwarding latency, Summit X650 helps enhance the data center and the HPCC environment.

10 Gigabit Ethernet Switching
Summit X650 offers 24-port 10 Gigabit Ethernet non-blocking switching with IEEE 802.3an standard-based 10GBASE-T interfaces or 10GBASE-X SFP+ interfaces. Summit X650 is capable of Layer 2 and Layer 3 forwarding at 363 million packets per second forwarding rate in a small 1RU form factor, enabling the next generation high-performance server deployment in data centers.

With its flexible architecture provided by the Versatile Interface Modules (VIMs), you can configure Summit X650 to best suit your network needs (see Figure 1).

SummitStack Support
Summit X650 supports compatible SummitStack solutions available in the popular Summit X250e, X450e, X450a, X460 and X480 series switches. Support for SummitStack offers a great migration path from gigabit-enabled servers to the new high-performance 10 gigabit-enabled servers. You can configure two SummitStack 40G stacking ports to provide ease of management for gigabit and 10 gigabit mixed stacking. SummitStack is provided through the standard VIM1-SummitStack module installed by default.

10 Gigabit Optimized Stacking Support
For higher density 10 Gigabit Ethernet requirements now or in the future, Summit X650 provides a 10 gigabit optimized stacking solution. Summit X650 offers an optional SummitStack256 module which provides up to 256 Gbps full duplex stacking bandwidth. With the SummitStack256 solution, Summit X650 can provide 256 Gbps stacking bandwidth optimized for high-density 10 Gigabit Ethernet switching and provides up to 192 10 Gigabit Ethernet ports with only 8RU of height in a fully redundant configuration. Summit X650 also offers an optional 48-port 10 Gigabit Ethernet non-blocking configuration by stacking two Summit X650 switches together with an optional VIM1-SummitStack512 module.

SummitStack-V—Flexible Stacking Over 10 Gigabit Ethernet
SummitStack-V capability utilizes 10 GbE ports as stacking ports, enabling the use of standard cabling and optics technologies used for 10 GbE such as XFP, SFP+, 10GBASE-T and XENPAK. SummitStack-V provides long-distance stacking connectivity of up to 40 km while reducing the cable complexity of implementing a stacking solution. SummitStack-V enabled 10 GbE ports must be physically direct-connected. SummitStack-V is compatible with Summit X450e, X450a, X460, X480, X650 and X670/X670V switches running the same version of ExtremeXOS.

Dedicated Uplinks at 80 Gbps
Summit X650 can support an additional 8-ports of 10 Gigabit Ethernet by installing the optional VIM-10G8X module which offers 8-port 10 Gigabit Ethernet SFP+ ports as well as SummitStack 40G ports. With this option, you can maximize the number of interfaces for servers up to 24 ports while using the dedicated 8-port 10 Gigabit Ethernet for uplink connectivity. The optional VIM-10G8X provides ideal bandwidth to the backbone by offering 80 Gbps aggregated bandwidth. With this 8-port 10 Gigabit Ethernet SFP+ module, Summit X650 can support up to 32 ports of 10 Gigabit Ethernet in a 1RU form factor. This option provides 3:1 oversubscription from front ports (total 24 ports) to uplink ports (total 8 ports) and maximizes server port density. Both in star and ring topologies, this architecture helps build a 10 Gigabit Ethernet data center or HPCC application (see Figure 2).

Figure 1: Summit X650 Port Configurations and Options
High-Performance Switching and Routing

High-Performance Cluster Computing (HPCC)

Ethernet-based HPCC installations have been increasing because of its highly economical architecture and lower cost of operation. With Summit X650, the cluster can be connected via 10 Gigabit Ethernet and with its low latency, Summit X650 helps increase the computing power for HPCC systems.

Supports Virtualized Data Centers

With the optional feature pack, Summit X650 switches also support Direct Attach™, which eliminates the virtual switch layer, simplifying the network and improving performance. Direct Attach enables data center simplification by reducing network tiers from 4 or 5 tiers to just 3 or 2 tiers, depending on the size of the data center.

To further enhance data center operations, Summit X650 switches support XNV™ (ExtremeXOS Network Virtualization), a set of software modules for the ExtremeXOS based switching product portfolio, and available via the Data Center Feature Pack for Extreme Networks Ridgeline™, a network and service management application. XNV brings insight, control and automation for highly virtualized data centers to the network.

Summit X650 switches also support Priority-based Flow Control (PFC, or IEEE 802.1Qbb), which allows network traffic to be controlled independently based on Class of Service. PFC allows network traffic that requires lossless traffic to be prioritized, while other traffic types that do not require or perform better without PFC can continue as normal. PFC is supported on Summit X650-24t or -24x (part number 17001B or 17002B) with the VIM1-10G8X module (part number 17012B).

Figure 2: Summit X650 High Speed Uplink Option
Versatile Architecture
Summit X650 is designed to help deploy multiple applications that require high-performance 10 Gigabit Ethernet switching and routing. By offering enterprise core class scalability, Summit X650 can be used anywhere you need 10 Gigabit Ethernet.

Enterprise Core Class Routing and Switching Scalability
In the enterprise campus network, there is a need for cost-effective 10 Gigabit Ethernet switches, both in small-sized core backbone and in traditional three tier network architectures. Summit X650 not only offers next generation server aggregation, but also offers the 10 Gigabit Ethernet campus aggregation application with its core class routing and switching scalability. Summit X650 can support up to 12,000 IPv6 longest prefix matching routing tables, 6,000 IP ARP entries and 2,000 IP multicast group entries. Summit X650 switch’s true versatility simplifies network deployment.

One Operating System
Extreme Networks provides simple network operation for the Ethernet switching products by offering one common OS throughout the entire ExtremeXOS switching portfolio. From 10/100 Mbps switching products such as Summit X150 and Summit X250e to the multi-10 gigabit core backbone BlackDiamond® modular chassis switches, all switches run exactly the same version of the OS, which helps deploy, operate and maintain your entire network.

Multiple Choices: UTP, Passive Copper or Fiber Optical Installation
With two models, Summit X650 provides a variety of configuration options from which to choose. One solution is based upon the latest IEEE standard specification called IEEE 802.3an, 10GBASE-T 10 Gigabit Ethernet over UTP.

10GBASE-T supports simpler cabling infrastructure, industry-standard and commonly used unshielded twisted pair cable, and can support up to 100 meters with Category 6a or 55 meters with Category 6 or 5e cable. 10GBASE-T is the first standard which provides a 100 meter solution over a copper cable infrastructure. The other solution is based upon the latest MSA technology called SFP+. The SFP+ model can support both passive copper cable for up to 10 meters and fiber optical cable installation with SFP+ fiber optical transceivers (see Figure 3).

Dual Speed Support
Both 10GBASE-T and SFP+ support the flexible, dual interface speed of 10 gigabit and gigabit. 10GBASE-T ports can auto-negotiate down to 1000BASE-T to provide a unified switch infrastructure for both 10GBASE-T and 1000BASE-T with UTP cable. SFP+ ports can take both 10 gigabit SFP and gigabit SFP, and depending upon the pluggable optics you choose, SFP+ can work in both modes.

Optimized Air Ventilation
Most of the servers installed in a standard 19-inch rack system flow air from front-to- back to maximize their cooling performance. Compared to side-to-side air flow, front-to-back air flow gives more effective cooling throughout the rack system in the data center. Summit X650 has a field-replaceable fan tray offering effective front-to-back air flow.

High Availability
Powered by the ExtremeXOS OS, Summit X650 supports process recovery and application upgrades without the need for a system reboot. Summit X650 provides the high network availability required for mission-critical servers and applications through its advanced modular OS, highly available hardware architecture and carrier-grade network redundancy protocols.

Modular Operating System for Non-Stop Operation
Preemptive Multitasking and Protected Memory
Summit X650 series switch allows each of many applications—such as Open Shortest Path First (OSPF) and Spanning Tree Protocol (STP)—to run as separate OS processes that are protected from each other. This drives increased system integrity and inherently protects against DoS attacks.

Process Monitoring and Restart
ExtremeXOS increases network availability using process monitoring and restart. Each independent OS process is monitored in real time. If a process becomes unresponsive or stops running, it can be automatically restarted.

Loadable Software Modules
The modular design of ExtremeXOS OS allows the upgrading of individual software modules, should this be necessary, leading to higher availability in the network (see Figure 4).

High Availability Network Protocols
Ethernet Automatic Protection Switching (EAPS)
EAPS allows the IP network to provide the level of resiliency and uptime that users expect from their traditional voice network. EAPS is more adaptable than Spanning Tree or Rapid Spanning Tree protocols and offers sub-second (less than 50 milliseconds) recovery that delivers consistent failover regardless of the number of VLANs, network nodes or network topology. Since EAPS allows the network to recover almost transparently, Voice-over-IP (VoIP) calls will not drop and digital video feeds will not freeze or pixelize in most situations.

Spanning Tree/Rapid Spanning Tree Protocols
Summit X650 supports Spanning Tree (802.1D), Per VLAN Spanning Tree (PVST+), Rapid Spanning Tree (802.1w) and Multiple Instances of Spanning Tree (802.1s) protocols for Layer 2 resiliency.

Software-Enhanced Availability
Software-enhanced availability allows users to remain connected to the network even if part of the network infrastructure is down. Summit X650 continuously checks for problems in the uplink connections using advanced Layer 3 protocols such as OSPF, VRRP and Extreme Standby Router Protocol™ (ESRP, supported in Layer 2 or Layer 3), and dynamically routes traffic around the problem.

Equal Cost Multipath
Equal Cost Multipath (ECMP) routing allows uplinks to be load balanced for performance and cost savings while also supporting redundant failover. If an uplink fails, traffic is automatically routed to the remaining uplinks and connectivity is maintained.

Link Aggregation (802.3ad)
Link aggregation allows trunking of up to eight links on a single logical connection, for up to 80 Gbps of redundant bandwidth per logical connection.

Multi-Switch LAG (M-LAG)
M-LAG can address bandwidth limitations and improve network resiliency, in part by routing network traffic around bottlenecks, reducing the risks of a single point of failure, and allowing load balancing across multiple switches.

Voice-Grade Stacking with SummitStack
All SummitStack stacking architecture is designed to support mission-critical applications by its highly available, rapid failover capability with n-1 master redundancy, distributed Layer 2 and Layer 3 switching, link aggregation across the stack, and distributed uplinks. SummitStack supports up to eight units in a stack (the mixture of the units can be Summit X650, X480, X460, X450a, X450e and X250e) providing 50 milliseconds failover for path failure and hitless master/backup failover along with hitless protocol support such as OSPF graceful restart and Network Login user authentication. Summit X650 provides chassis-like management and availability with its SummitStack stacking technology (see Figure 5).

Hardware Redundancy
Summit X650 supports a dual redundant AC/DC power supply, to provide high availability. Power supply can be hot-swapped and replaced should it fail. Summit X650 supports a removable fan with field replaceability.
High Availability

- Memory protected processes under real-time scheduling that cannot impact each other nor kernel
- Processes are monitored and can be restarted or other action taken if necessary
- Hitless failover infrastructure for dual management systems and stacking
- Designed to allow application modules to be upgraded during runtime
- Application modules can be added during runtime
- Single management point for up to eight units
- High-speed 40 Gbps, 256 Gbps or 512 Gbps stacking
- Rapid Failover for converged applications
- Can mix Summit X250e, Summit X450a/e series, Summit X460, Summit X480 and Summit X650 series switches for SummitStack™ 40 Gbps stacking

Figure 4: ExtremeXOS Modular Design

Figure 5: SummitStack Stacking Architecture
Comprehensive Security
Implementing a secure network means providing protection at the network perimeter as well as the core. Working together with Extreme Networks Sentriant® family of products, Summit X650 uses advanced security functions to protect your network from known or potential threats.

Robust IP and MAC Security Framework

Media Access Control (MAC) Lockdown
MAC security allows the lockdown of a port to a given MAC address and to limit the number of MAC addresses on a port. This can be used to dedicate ports to specific hosts or devices such as VoIP phones or printers and avoid abuse of the port—a capability that can be especially useful in environments such as hotels. In addition, an aging timer can be configured for the MAC lockdown, protecting the network from the effects of attacks using (often rapidly) changing MAC addresses.

IP Security
ExtremeXOS IP security framework protects the network infrastructure, network services such as DHCP and DNS and host computers from spoofing and man-in-the-middle attacks. It also protects the network from statically configured and/or spoofed IP addresses and builds an external trusted database of MAC/IP/port bindings providing the traffic’s source from a specific address for immediate defense.

Identity Manager
Identity Manager allows network managers to track users who access their network. User identity is captured based on NetLogin authentication, LLDP discovery and Kerberos snooping. ExtremeXOS uses the information to then report on the MAC, VLAN, computer hostname, and port location of the user. Further, Identity Manager can create both roles and policies, and then bind them together to create role-based profiles based on organizational structure or other logical groupings, and apply them across multiple users to allow appropriate access to network resources. In addition, support for Wide Key ACLs further improves security by going beyond the typical source/destination and MAC address as identification criteria access mechanism to provide filtering capabilities.

Threat Detection and Response

CLEAR-Flow Security Rules Engine
CLEAR-Flow Security Rules Engine provides first order threat detection and mitigation, and mirrors traffic to security appliances for further analysis of suspicious traffic in the network.

sFlow
sFlow® is a sampling technology that provides the ability to sample application level traffic flows on all interfaces simultaneously.

Port Mirroring
To allow threat detection and prevention, Summit X650 supports many-to-one and one-to-many port mirroring. This allows the mirroring of traffic to an external network appliance such as an intrusion detection device for trend analysis or for utilization by a network administrator for diagnostic purposes. Port mirroring can also be enabled across switches in a stack.

Line-Rate ACLs
ACLs are one of the most powerful components used in controlling network resource utilization as well as protecting the network. Summit X650 supports up to 2,048 centralized ACLs per 12-port block based on Layer 2-, 3- or 4-header information such as the MAC or IP source/destination address. ACLs are used for filtering the traffic, as well as classifying the traffic flow to control bandwidth, priority, mirroring, and policy-based routing/switching.

Denial of Service Protection
Summit X650 effectively handles Denial of Service (DoS) attacks. If the switch detects an unusually large number of packets in the CPU input queue, it assembles ACLs that automatically stop these packets from reaching the CPU. After a period of time, these ACLs are removed, and reinstalled if the attack continues. ASIC-based LPM routing eliminates the need for control plane software to learn new flows, allowing more network resilience against DoS attacks.

Secure and Comprehensive Network Management
As the network becomes a foundation of the enterprise application, network management becomes an important piece of the solution. Summit X650 supports comprehensive network management through Command Line Interface (CLI), SNMP v1, v2c, v3, and ExtremeXOS ScreenPlay™ embedded XML-based Web user interface. With a variety of management options and consistency across other Extreme Networks modular and stackable switches, Summit X650 series switches provide ease of management for demanding converged applications.
Comprehensive Security

Extreme Networks has developed tools that simplify and help in efficiently managing your network. Ridgeline™ network and service management provides fault, configuration, accounting, performance and security functions, allowing more effective management of Extreme Networks products, solutions and third-party devices, in a converged network.

For carrier networks, Ridgeline enables the shift from reactive circuit monitoring to proactive service management. The key features integrated into the Service Advisor Feature Pack unify service fulfillment, service assurance and service engineering to enable carriers to more effectively manage next-generation residential triple play, business Ethernet and Ethernet mobile backhaul services.
Target Applications

Summit X650 offers a variety of applications with high-performance, low latency switching along with highly-scalable Layer 2 and Layer 3 switching.

Top-of-Rack Switch for Servers in the Enterprise Data Centers

In the enterprise data center, many servers and storage systems are packed in racks, with all systems needing high-speed connectivity. A top-of-rack architecture is one way to simplify the cabling infrastructure and minimize the space requirements in the enterprise data center. Summit X650 is optimized to support 10 gigabit connectivity for servers and other network attached devices. With its 1RU design, Summit X650 allows maximizing computing power per rack without taking space away from other network-attached computing devices.

High-Performance 10 Gigabit Core Switch for a Small Network and Aggregation Switch in a Traditional Three-Tiered Network

Summit X650 offers enterprise-core class scalability for both Layer 2 and Layer 3 switching. You can support up to 12,000 IPv6 longest prefix matching routes, 6,000 IP ARP entries and 2,000 multicast groups. The Summit X650 switch can also be used in the network aggregation layer in an enterprise network. With its versatile design, Summit X650 simplifies enterprise network deployment.
Target Applications

High-Performance Cluster Computing
HPCC consists of many servers working cooperatively to solve large computational problems. With the use of relatively inexpensive servers, a significant amount of processing power can be cost-effectively packed into a relatively small footprint. Summit X650 series switches address the need for high-performance and cost-effective connectivity required for HPCC using 10 Gigabit Ethernet as the interconnect technology.

Converged Residential, Business and Mobile Backhaul Service in Metro Areas
In metro areas, regional and global carriers often deploy a stacked ring architecture that adds an Ethernet Aggregation tier to the Ethernet Access Ring Architecture. In this configuration, multiple Access Aggregation central offices are served by multiple 10 GbE aggregation rings from a Metro Core central office. The Ethernet Access central offices are equipped with Summit X650 Ethernet Transport switches, and the Ethernet Aggregation and carrier core central office are equipped with BlackDiamond 8810 Ethernet Transport switches with 8900-xl series modules.
Accessories

Summit X650 Options: Summit X650 provides highly flexible modular hardware design, and offers customized configurations for your network requirements.

Versatile Interface Modules

**VIM1-SummitStack**

Default option for Summit X650 switches. VIM1-SummitStack provides two SummitStack ports and four Gigabit Ethernet SFP ports. SummitStack ports are shared with the last two 10 Gigabit Ethernet ports in the front panel.

**VIM1-10G8X**

Option module for high-speed backbone connectivity. VIM1-10G8X provides eight ports of 10 Gigabit Ethernet SFP+ and SummitStack ports. With this option, SummitStack ports are dedicated and not shared with any other port in the switch.

**VIM1-SummitStack256**

Option module for high-speed stacking. VIM1-SummitStack256 provides SummitStack256 ports. SummitStack256 provides up to 256 Gbps of stacking bandwidth for up to eight Summit X650 switches in a stack.

**VIM1-SummitStack512**

Option module for high-speed stacking. VIM1-SummitStack512 provides SummitStack512 ports. SummitStack512 provides up to 512 Gbps of stacking bandwidth for up to two Summit X650 switches in a stack and supports 48-port 10 Gigabit Ethernet non-blocking switching.
Accessories

Power Supply and Fan Tray

Summit X650 AC and DC PSU
The Summit X650 switch does not include a power supply. Summit X650 has two unpopulated power supply slots and can take up to two power supplies in a redundant configuration.

A minimum of one power supply is required for operation.

Summit X650 Fan Tray
Summit X650 switch comes with one fan tray which is field replaceable. A fan tray can be ordered separately as a spare, and in case of fan failure, the fan tray can be replaced by the customer.
Technical Specifications

ExtremeXOS 12.5
Supported Protocols

Switching
- RFC 3619 Ethernet Automatic Protection Switching (EAPS) and EAPsV2
- IEEE 802.1D – 1998 Spanning Tree Protocol (STP)
- IEEE 802.1D – 2004 Spanning Tree Protocol (STP and RSTP)
- IEEE 802.1w – 2001 Rapid Reconfiguration for RSTP
- IEEE 802.1Q – 2003 (formerly IEEE 802.1s)
- Multiple Instances of STP, MSTP
- EMISTP, Extreme Multiple Instances of Spanning Tree Protocol
- PVST+, Per VLAN STP (802.1Q interoperable)
- Draft-ietf-bridge-rstpmb-03.txt – Definitions of Managed Objects for Bridges with Rapid Spanning Tree Protocol
- Extreme Standby Router Protocol™ (ESRP)
- IEEE 802.1Q – 1998 Virtual Bridged Local Area Networks
- IEEE 802.5ad Static load sharing configuration and LACP based dynamic configuration
- Software Redundant Ports
- Multi-switch Link Aggregation Groups (M-LAG)
- IEEE 802.1AB – LLDP Link Layer Discovery Protocol
- LLDP Media Endpoint Discovery (LLDP-MED), ANSI/TIA-1057, draft 08
- Extreme Discovery Protocol (EDP)
- Extreme Loop Recovery Protocol (ELRP)
- Extreme Link State Monitoring (ELSM)
- IEEE 802.1ag L2 Ping and traceroute, Connectivity Fault Management
- ITU-T Y.1731 Frame delay measurements

Security, Switch and Network Protection
- Secure Shell (SSH-2) client/server with encryption/authentication (requires export controlled encryption module)
- SNMPv3 user based
- SNMPv3 user based security, with encryption/authentication (see above)
- RFC 1492 TACACS+
- RFC 2138 RADIUS Authentication
- RFC 2139 RADIUS Accounting
- RFC 3579 RADIUS EAP support for 802.1x
- RADIUS Per-command Authentication
- Access Profiles on All Routing Protocols
- Network Login – 802.1x, Web and MAC-based mechanisms
- IEEE 802.1x – 2001 Port-Based Network Access Control for Network Login
- Multiple supplicants with multiple VLANs for Network Login (all modes)
- Fallback to local authentication database (MAC and Web-based methods)
- Guest VLAN for 802.1x
- RFC 1866 HTML – Used for Web-based Network Login and ExtremeXOS ScreenPlay
- SSL/TLS transport – used for Web-based Network Login and ExtremeXOS ScreenPlay (requires export controlled encryption module)
- MAC Security – Lockdown and Limit
- IP Security – RFC 3046 DHCP Option 82 with port and VLAN ID
- IP Security – Trusted DHCP Server
- Layer 2/3/4 Access Control Lists (ACLs)
- RFC 2267 Network Ingress Filtering
- RPF (Unicast Reverse Path Forwarding) Control via ACLs
- Wire-speed ACLs
- Rate Limiting/Shaping by ACLs
- IP Broadcast Forwarding Control
- ICMP and IP-Option Response Control
- SYN attack protection
- CPU DoS Protection with traffic rate-limiting to management CPU
- Robust against common network attacks:
  - CERT (http://www.cert.org)
  - CA-2003-04: “SQL Slammer”
  - CA-2002-36: “SShredder”
  - CA-2002-03: SNMP vulnerabilities
  - CA-98-13: tcp-denial-of-service
  - CA-98.01: smurf
  - CA-97.28: Teardrop_Land -Teardrop and “LAND” attack
  - CA-96.26: ping
  - CA-96.21: tcp_syn_flooding
  - CA-96.01: UDP_service_denial
  - CA-95.01: IP_Spoofing_Attacks_and_Hijacked_Terminal_Connections
  - IP Options Attack
- Host Attack Protection
  - Teardrop, boink, opentear, jolt2, newtear, nestea, syndrop, smurf, fragile, papas-murf, synk4, raped, winfreeze, ping –f, ping of death, pepsi5, Latierra, Winnuke, Simping, Ping, Ascend, Stream, Land, Octopus

Security, Router Protection
- IP Security – DHCP enforcement via Disable ARP Learning
- IP Security – Gratuitous ARP Protection
- IP Security – DHCP Secure ARP/ARP Validation
- Routing protocol MD5 authentication (see above)

Security Detection and Protection
- CLEAR-Flow, threshold-based alerts and actions (in non SummitStack configuration only)
- Identity Manager

IPv4 Host Services
- RFC 1122 Host Requirements
- RFC 768 UDP
- RFC 791 IP
- RFC 792 ICMP
- RFC 793 TCP
- RFC 826 ARP
- RFC 894 IP over Ethernet
- RFC 1027 Proxy ARP
- RFC 2068 HTTP server
- IGMP V1/V2/V3 Snooping with Configurable Router Registration Forwarding
- IGMP Filters
- PIM Snooping
- Static IGMP Membership
- Multicast VLAN Registration (MVR)
Technical Specifications

IPv4 Router Services
- RFC 1812 Requirements for IP Version 4 Routers
- RFC 1519 CIDR
- RFC 1256 IPv4 ICMP Router Discovery (IRDP)
- Static Unicast Routes
- Static Multicast Routes
- RFC 1058 RIP v1
- RFC 2453 RIP v2
- Static ECMP
- RFC 1112 IGMP v1
- RFC 2236 IGMP v2
- RFC 3376 IGMP v3

- RFC 2787 VRRP MIB
- RFC 2328 OSPF v2 (Edge-mode)
- OSPF ECMP
- OSPF MDS Authentication
- RFC 1587 OSPF NSSA Option
- RFC 1765 OSPF Database Overflow
- RFC 2370 OSPF Opaque LSA Option
- RFC 3623 OSPF Graceful Restart
- RFC 1850 OSPFv2 MIB
- RFC 2362 PIM-SM (Edge-mode)
- RFC 2934 PIM MIB
- RFC 3569, draft-ietf-idmr-ssm-arch-06.txt
- PIM-SSM PIM Source Specific Multicast
- draft-ietf-pim-mib-v2-01.txt
- Mtrace, a “traceroute” facility for IP Multicast: draft-ietf-idmr-traceroute-ipm-07
- Mininfo, the multicast router information tool based on Appendix-B of draft-ietf-idmr-dvmrp-v3-11

IPv6 Host Services
- RFC 3587, Global Unicast Address Format
- Ping over IPv6 transport
- Traceroute over IPv6 transport
- RFC 4861, Neighbor Discovery for IP Version 6, (IPv6)
- RFC 2463, Internet Control Message Protocol (ICMPv6) for the IPv6 Specification
- RFC 2464, Transmission of IPv6 Packets over Ethernet Networks
- RFC 2465, IPv6 MIB, General Group and Textual Conventions
- RFC 2466, MIB for ICMPv6
- RFC 2462, IPv6 Stateless Address Auto Configuration – Host Requirements
- RFC 1981, Path MTU Discovery for IPv6, August 1996 – Host Requirements
- RFC 3513, Internet Protocol Version 6 (IPv6) Addressing Architecture
- Telnet server over IPv6 transport
- SSH-2 server over IPv6 transport

IPv6 Interworking and Migration
- RFC 2893, Configured Tunnels
- RFC 3056, 6to4

IPv6 Router Services
- RFC 2462, IPv6 Stateless Address Auto Configuration – Router Requirements
- RFC 1981, Path MTU Discovery for IPv6, August 1996 – Router Requirements
- RFC 2710, IPv6 Multicast Listener Discovery v1 (MLDV1) Protocol
- Static Unicast routes for IPv6
- RFC 2080, RIPv3
- RFC 2740 OSPF v3 (Edge-mode) (Requires Advanced Edge License)
- Static ECMP

Core Protocols for Layer 2, IPv4 and IPv6

QoS and VLAN Services

Quality of Service and Policies
- IEEE 802.1Q – 1998 (802.1p) Packet Priority
- RFC 2474 DiffServ Precedence, including 8 queues/port
- RFC 2598 DiffServ Expedited Forwarding (EF)
- RFC 2597 DiffServ Assured Forwarding (AF)
- RFC 2475 DiffServ Core and Edge Router Functions

Traffic Engineering
- RFC 3784 IS-IS Externs for Traffic Engineering (wide metrics only)

VLAN Services: VLANs, vMANS
- IEEE 802.1Q VLAN Tagging
- IEEE 802.1v: VLAN classification by Protocol and Port
- Port-based VLANs
- Protocol-based VLANs
- MAC-based VLANs
- Multiple STP domains per VLAN
- Upstream Forwarding Only/Disable Flooding
- RFC 5517 Private VLANs
- VLAN Translation
- IEEE 802.1ad Provider Bridge Network, virtual MANs (vMANs)
- vMAN Ethertype Translation/Secondary vMAN Ethertype
- Multicast Support for PVLAN
- Multicast Support for VLAN Aggregation
- VLAN Aggregation

Data Center
- Direct Attach (IEEE 802 VEPA) (Supported in a feature pack)
- Priority Flow Control (IEEE 802.1Qbb) (Available on the Summit X650 PNs 1701B, 1702B and 17012B only)
- XNV (ExtremeXOS Network Virtualization)
Technical Specifications

Summit X650

General Specifications

Performance
- 488 Gbps aggregated switch bandwidth, 363 Mpps forwarding rate (with VIM1-SummitStack)
- 680 Gbps aggregated switch bandwidth, 506 Mpps forwarding rate (with VIM1-10G8X)
- 736 Gbps aggregated switch bandwidth, 548 Mpps forwarding rate (with VIM1-SummitStack256)
- 992 Gbps aggregated switch bandwidth, 738 Mpps forwarding rate (with VIM1-SummitStack512)
- 9216 Byte maximum packet size (Jumbo Frame)
- Store-and-Forward and Cut-Through switching support
- Less than 2 micro second latency (64-byte packet)
- 128 load sharing trunks, up to 8 members per trunk
- 4,094 VLANs (Port, Protocol, IEEE 802.1Q)
- 2,048 ingress and 512 egress ACL rules per 12-port block

Forwarding Tables
- Layer 2/MAC Addresses: 32K
- IPv4 Host Addresses: 6K
- IPv4 LPM Entries: 12K
- IPv6 Host Addresses: 3K
- IPv6 LPM Entries: 6K

CPU, Memory
- 64-bit MIPS Processor Dual Core, 1 GHz clock
- 1GB ECC DRAM
- 256GB Compact Flash
- USB port for external USB flash

QoS, Rate Limiting
- 2,048 ingress bandwidth meters/12-port block
- Ingress and egress bandwidth policing/rate limiting per flow/ACL
- 8 QoS egress queues/port
- Egress bandwidth rate shaping per egress queue and per port
- Rate Limiting Granularity: 64 Kbps

LED Indicators
- Per port status LED including power status
- System Status LEDs: management, fan and power

External Ports with VIM1-SummitStack
- 24-port 10GBASE-T (1G/10G dual speed), RJ45, 4-port 1000BASE-X SFP+, 2-port SummitStack* (Summit X650-24t)
- 24 port 10GBASE-X SFP+ (1G/10G dual speed), 4-port 1000BASE-X SFP, 2-port SummitStack* (Summit X650-24x)
- 1-port RS-232c Serial (control port)
- 110/100/1000BASE-T out-of-band management port

External Ports with VIM1-10G8X
- 24-port 10GBASE-T (1G/10G dual speed), RJ45, 8-port 10GBASE-X SFP+ (1G/10G dual speed), 2-port SummitStack (Summit X650-24t)
- 32-port 10GBASE-X SFP+ (1G/10G dual speed), 2-port SummitStack (Summit X650-24x with VIM1-SummitStack)
- 1-port RS-232c Serial (control port)
- 110/100/1000BASE-T out-of-band management port

Option Slot
- Slot for Versatile Interface Module 1 (VIMI)

Power Supply Support
- Summit X650 AC PSU

Physical Specifications

Summit X650
- Height: 1.73 Inches/4.4 cm
- Width: 17.4 Inches/44.1 cm
- Depth: 26 Inches/65.5 cm
- Weight: 738 Mpps forwarding rate (with VIM1-SummitStack256)
- 738 Mpps forwarding rate (with VIM1-SummitStack512)
- 128 load sharing trunks, up to 8 members per trunk
- 4,094 VLANs (Port, Protocol, IEEE 802.1Q)
- 2,048 ingress and 512 egress ACL rules per 12-port block

Summit X650 FAN module
- Height: 1.65 Inches/4.2 cm
- Width: 8.4 Inches/21.3 cm
- Depth: 6.0 Inches/15.3 cm
- Weight: 0.45 lbs/0.2 kg

Summit X650-24t with VIM1-SummitStack512 Module

Power: Summit X650-24t
- (Manufacturing part number 800246-10)

Summit X650-24t with VIM1-SummitStack Module

[AC PSU]
- Nominal Input Ratings: 100 – 240V–, 50/60Hz, 8.0A
- Input Current: 7.8A @ 100V– (lowline)
- Heat Dissipation: 689W (2,351 BTU/h)
- Power Consumption: 689W (2,351 BTU/h)

[DC PSU]
- Nominal Input Ratings: 48 – 60V, 24.0A
- Input Current: 12.85A @ 48V- (lowline)
- Heat Dissipation: 617W (2,105 BTH/h)
- Power Consumption: 617W (2,105 BTH/h)

Summit X650-24t with VIM1-10G8X Module

[AC PSU]
- Nominal Input Ratings: 100 – 240V–, 50/60Hz, 8.0A
- Input Current: 7.8A @ 100V– (lowline)
- Heat Dissipation: 780W (2,661 BTU/h)
- Power Consumption: 780W (2,661 BTU/h)

[DC PSU]
- Nominal Input Ratings: 48 – 60V, 24.0A
- Input Current: 14.61A @ 48V- (lowline)
- Heat Dissipation: 701W (2,393 BTH/h)
- Power Consumption: 701W (2,393 BTH/h)

Summit X650-24t with VIM1-SummitStack Module

[AC PSU]
- Nominal Input Ratings: 100 – 240V–, 50/60Hz, 8.0A
- Input Current: 7.8A @ 100V– (lowline)
- Heat Dissipation: 798W (2,723 BTU/h)
- Power Consumption: 798W (2,723 BTU/h)

[DC PSU]
- Nominal Input Ratings: 48 – 60V, 24.0A
- Input Current: 12.5A @ 60V- (highline)
- Heat Dissipation: 780W (2,661 BTU/h)
- Power Consumption: 780W (2,661 BTU/h)

Storage & Transportation Conditions

Summit X650-24t

- Weight: 0.45 lbs/0.2 kg
- Depth: 6.0 Inches/15.3 cm
- Width: 4.8 Inches/12.3 cm
- Height: 1.65 Inches/4.2 cm
- Weight: 0.45 lbs/0.2 kg

Summit X650-24t with VIM1-SummitStack512 Module

- Weight: 2.0 lbs/0.91 kg
- Depth: 9.9 Inches/25.2 cm
- Width: 5.2 Inches/13.2 cm
- Height: 1.73 Inches/4.4 cm
- Weight: 1.46 lbs/0.66 kg

Summit X650-24t with VIM1-10G8X Module

- Weight: 2.0 lbs/0.91 kg
- Depth: 9.9 Inches/25.2 cm
- Width: 5.2 Inches/13.2 cm
- Height: 1.73 Inches/4.4 cm
- Weight: 1.46 lbs/0.66 kg

Summit X650-24t with VIM1-SummitStack Module

- Weight: 2.0 lbs/0.91 kg
- Depth: 9.9 Inches/25.2 cm
- Width: 5.2 Inches/13.2 cm
- Height: 1.73 Inches/4.4 cm
- Weight: 1.46 lbs/0.66 kg

Summit X650-24t

- Weight: 2.0 lbs/0.91 kg
- Depth: 9.9 Inches/25.2 cm
- Width: 5.2 Inches/13.2 cm
- Height: 1.73 Inches/4.4 cm
- Weight: 1.46 lbs/0.66 kg

1 Excludes port #23 and port #24
2 SummitStack ports on VIM1-SummitStack are shared with the last two 10 Gigabit Ethernet port on front panel (port #23 and port #24)
Technical Specifications

Power: Summit X650-24t (Manufacturing part number 800320-10)

Summit X650-24t with VIM1-SummitStack Module

[AC PSU]
- Nominal Input Ratings: 100 – 240V-, 50/60Hz, 8.0A
- Input Current: 5.5A @ 100V- (lowline) 1.2A @ 240V- (highline)
- Heat Dissipation: 287 W (979 BTU/h)
- Power Consumption: 291 W (992 BTU/h)

[DC PSU]
- Nominal Input Ratings: 48 – 60V, 9.0A
- Input Current: 5.9A @ 48V- (lowline) 4.8A @ 60V- (lowline)
- Heat Dissipation: 287 W (979 BTU/h)
- Power Consumption: 287 W (979 BTU/h)

Summit X650-24x with VIM1-SummitStack Module

[AC PSU]
- Nominal Input Ratings: 100 – 240V-, 50/60Hz, 4.75A
- Input Current: 3.8A @ 100V- (lowline) 1.6A @ 240V- (highline)
- Heat Dissipation: 383W (1,307 BTU/h)
- Power Consumption: 383W (1,307 BTU/h)

[DC PSU]
- Nominal Input Ratings: 48 – 60V, 9.0A
- Input Current: 7.7A @ 48V- (lowline) 6.2A @ 60V- (lowline)
- Heat Dissipation: 372 W (1,269 BTU/h)
- Power Consumption: 372 W (1,269 BTU/h)

All Summit X650 Series Switches

Regulatory/Safety

North American Safety of ITE
- UL 60950-1 1st Ed., Listed Device (U.S.)
- CSA 22.2#60950-1-03 1st Ed. (Canada)
- Complies with FCC 21CFR 1040.10 (U.S. Laser Safety)
- CDHR Letter of Approval (U.S. FDA Approval)

European Safety of ITE
- EN60950-1:2006
- EN 60825-1+A2:2001 (Lasers Safety)
- TUV-R GS Mark by German Notified Body
- 2006/95/EC Low Voltage Directive

International Safety of ITE
- CB Report & Certificate per IEC 60950-1:2006 + National Differences
- AS/NZS 60950-1 (Australia/New Zealand)

EMI/EMC Standards

North America EMC for ITE
- FCC CFR 47 part 15 Class A (U.S.A.)
- ICES-003 Class A (Canada)

European EMC Standards
- EN 55022:2006 Class A
- EN 55024:2009 Class A includes IEC 61000-4-2, 3, 4, 5, 6, 11
- EN 61000-3-2:2000 (Harmonics)
- EN 61000-3-3 1995+A2:2005 (Flicker)
- EN/ETSI 300 019-2-2:2005 Radiated Immunity 10V/m, Criteria A
- EC/EN 61000-4-2:2001 Electrostatic Discharge, 8kV Contact, 15 kV Air, Criteria A
- EC/EN 61000-4-3:2006 Radiated Immunity 10V/m, Criteria A
- EC/EN 61000-4-2006 Transient Burst, 1 kV, Criteria A
- IEC/EN 61000-4-5:2005 Surge, 2 kV L-L, 2 kV L-G, Level 3, Criteria A
- IEC/EN 61000-4-6:2005 Conducted Immunity, 0.15-80 MHz, 10V/m unmod.
- RMS, Criteria A
- EC/EN 61000-4-11:2004 Power Dips & Interruptions, >30%, 25 periods, Criteria C

Country Specific
- VCCI Class A (Japan Emissions)
- ACMA (C-Tick) (Australia Emissions)
- CCC Mark
- KCC Mark EMC Approval (Korea)

Telecom Standards
- EN/ETSI 300 386:2001 (TELETRANSMISSIONS)
- EN/ETSI 300 386:2003 (Telecommunications)

Warranty
- 90-days on Software
- For warranty details, visit www.extremenetworks.com/go/warranty

IEEE 802.3 Media Access Standards
- IEEE 802.3ab 100BASE-T
- IEEE 802.3z 1000BASE-X
- IEEE 802.3ae 10GBASE-X
- IEEE 802.3an 10GBASE-T

Environmental Standards
- EN/ETSI 300 019-2-1 v2.12 (2000-09) - Class 1.2 Storage
- EN/ETSI 300 019-2-2 v2.12 (1999-09) - Class 2.3 Transportation
- EN/ETSI 300 019-2-3 v2.12 (2003-04) - Class 3.1e Operational
- EN/ETSI 300 753 (1997-10) - Acoustic Noise
- ASTM D3580 Random Vibration Unpackaged 1.5G
Technical Specifications

Power Supply Units

Summit X650 AC PSU

Dimensions and Weight

Summit X650 AC PSU
- Height: 1.57 Inches/4.0 cm
- Width: 3.2 Inches/8.1 cm
- Depth: 12.6 Inches/32.0 cm
- Weight: 3.0 lbs/1.4 kg

Power
- Voltage input range: 90 to 264 V
- Nominal input ratings: 100 to 240 V, 50/60 Hz, 10 A
- Nominal input current @ full loads: 12 A @ 90 V (low-line) 5 A @ 230 V (high-line)
- Maximum in-rush current: 100 A
- Efficiency: 80% with 60% to 100% load
- Line frequency range: 47 to 63 Hz
- Power supply input socket: IEC 320 C14
- Power cord input plug: IEC 320 C13
- Output: 12 V, 70 A max, 840 Watts, 3.3 V, 6 A max, 19.8 Watts

Summit X650 DC PSU

Dimensions and Weight

Summit X650 DC PSU
- Height: 1.57 Inches/4.0 cm
- Width: 3.2 Inches/8.1 cm
- Depth: 12.6 Inches/32.0 cm
- Weight: 3.0 lbs/1.4 kg

Power
- Voltage input range: -48 to -60 VDC
- Nominal input ratings: -39 to -72 VDC
- Nominal input current @ full loads: 26 A @ 40 V, 22 A @ 48 V, 15 A @ 72 V
- Maximum in-rush current: 18A
- Efficiency: >80% typical loads
- Minimum wire size 12 AWG (3.3 mm2) copper stranded
- Output: 12 V, 70 A max, 840 Watts, 3.3 V, 6 A max, 19.8 Watts
